

Back-end/Full Stack Web developer

*BoligPortal is **the biggest property rental website** – and one of the biggest websites – in Denmark, and we have big ambitions.*

We are 12 full-time developers engaged all the way from idea to deployment and there is a high degree of **freedom to choose** the right technique and solution for the given task/challenge.

You will be part of a strong, competent and **international** team located in Aarhus putting all efforts into the agile process of developing the BoligPortal **website and app for mobile devices**.

The short version of the tech stack is JavaScript, PHP, Python, GitHub and Slack. Add a bit of Trello, courage to change and just-try-it mentality, hardly any time-consuming meetings and you will get the picture. We are committed to **DevOps practice**, and the operation/tool environment is constantly being updated to modern techniques based on Docker, Kubernetes and AWS/Google Cloud/Azure.

Currently we are building a **Microservice based architecture** to support our frontend guys and we are seeking a **Back-end/Full Stack web developer with interests in DevOps** to join this team and:

- Participate in architectural debates and design of the future MSA based system
- Find, share and integrate new tools and technologies for improving the total outcome
- Most importantly: Make some awesome code and be passionate about the things we work with.

Application and questions

You are **proud** of all the nerdy stuff you have made, and the best way to impress us is to show what you have done.

Send your application/resume to Karsten Børglum, krb@boligportal.dk. Contact via email if you have any questions about the position. Start as soon as possible.
