

Front-end developer

*Are you geeky in a cool way and do you want to work in a young development environment and participate in the **development of new features and functionality** for our website and app at BoligPortal?*

Front-end developers at BoligPortal are working closely together with product owner, other stakeholders and the Product Designer in understanding the customer needs and requirements in order to build the perfect product. Of course you will also write the code, but we'd like you to be so **passionate** about the product that you insist on **participating in the creative process** both before and while you're building.

You will be part of a strong, competent and **international** team located in Aarhus putting all efforts into the agile process of developing – and actually rethinking – the BoligPortal **website and app for mobile devices**.

We are 12 full-time developers engaged all the way from idea to deployment and with a high degree of **freedom to choose** the right technique and solution for the challenges at hand.

The short version of the tech stack is **React**, Node.js, PHP, Python, GitHub and Slack. Add a bit of Trello, courage to change and just-try-it mentality, hardly any time-consuming meetings and you will get the picture.

You have lots of experience with **JavaScript** and most importantly you are **proud** of all the nerdy stuff you have made.

Application and questions

The best way to impress us is to show what You have done, so send your application/resume to Karsten Børglum, krb@boligportal.dk.

Contact via email if you have any questions about the position.

Start as soon as possible.
