

FRONT END DEVELOPER

We are looking for a talented front end developer to join our new team in creating a unique concept with international potential.

About the position

You will be part of a team focusing on creating new solutions for the housing market. We start out without legacy, and we expect a high speed in both development and decision making. In this position, you will be among the first developers in the unit – as such, you will contribute to setting the direction of the team.

In addition to this team, you will be part of a professional and innovative environment with +10 developers working on different projects, in close cooperation with our business development department and our customers.

Responsibilities

It is important to us to find the right people for our team, so we will hire continuously, when we find the right candidates. Therefore, you may find yourself performing different tasks to make sure we all succeed together. However, your primary task will be to develop and take charge of the front end part of our concept. Together with our backend and the business, you will play a key role in creating high quality holistic solutions.

Technologies

Our existing software is written in Node.js and has a NoSQL database. We build micro services that communicate through GraphQL in a messaging based infrastructure supplied by Apache Kafka. We build our front end around React.

Qualifications

You probably know or have experience working with most of the above mentioned technologies, and you are fluent in JavaScript. In addition, neat and structured object oriented code should be default for you. As a frontend developer, you can also create great looking, responsive CSS.

About you

You are an experienced developer with documented results in creating successful concepts working in teams. For you any good solution starts with in-depth understanding of what the customer is trying to accomplish. Your force is frontend, thus you have a good understanding of UX and flair for design. You understand backend and have a strong theoretical background, making you able to discuss the right choice of technology with back end developers.

You are curious by nature, and you stay updated on new technologies, concepts and trends. You thrive around passionate people driven by the chance to create the solutions of tomorrow. You are a skilled communicator, a team player, and you believe that we achieve the best possible outcome working together – in the team as well as with customers and business partners.

Application

Are you the one we are looking for? Then send your motivated application and CV to Lars Clausen: lars@boligportal.dk. If you have any questions, you are more than welcome to contact us.

Application date: As soon as possible
